

## ABOUT WORKSHOP

Design thinking is a non-linear, iterative process which seeks to understand users, challenge assumptions, redefine problems and create innovative solutions to prototype and test. The method consists of 5 phases named Empathize, Define, Ideate, Prototype and Test. It is most useful when one wants to tackle problems that are ill-defined or unknown. The workshop in particular aims to introduce attendees the design thinking techniques on how to solve a problem efficiently and faster utilizing available teamwork.
