The problem that led to the solution of using Al in the retail market or marketplaces like Amazon was the need to personalize the shopping experience for customers. Customers regularly give off clues about the items they desire and like and how much they are ready to spend for them. Retailers needed a way

to gather and analyze this information to provide personalized recommendations to customers. The use of AI and machine learning allowed retailers to streamline supply chain and logistics, improve personalization and customer experiences, and reduce costs, making it a valuable tool for retailers. This led

to increased profits and boosted performance for companies like Amazon.
